

Index of terms

- **ATC**- Available Transfer Capability is a measure of the transfer capability remaining in the physical transmission Network for further commercial activity, over and above already committed uses.
- **Feasibility Study**- Preliminarily evaluates the feasibility of the proposed interconnection to the Transmission System.
- **System Impact Study (SIS)**- Assessment by the transmission provider of the adequacy of the transmission system to accommodate a request for service and whether any additional costs may be incurred in order to provide transmission service.
- **Facilities Study (SFS)**- An engineering study conducted by the transmission provider to determine the required modifications to the transmission provider's transmission system, including the cost and scheduled completion date for modifications, that will be required to provide the requested service.
- **Long Term (LT) Service**- Service with a term of one year or more.
- **Network (NT) Load**- The load that a Network Customer designates for Network Integration Transmission Service. Network Load shall include all load served by the output of any Network Resource designated by the customer.
- **Network Operating Agreement**- Executed agreement that contains the terms and conditions under which the customer will operate its facilities.
- **Network Resource**- Any designated generating resource owned, purchased or leased by a customer. They do not include any resource, any portion thereof, that is committed for sale to third parties.
- **Point of Delivery**- Points on the transmission providers system, or on other utility systems where capacity and energy transmitted will be made available to the receiving party.
- **Point of Receipt**- Points of interconnection on the transmission provider's system where capacity and energy will be made available to the transmission provider by the delivering party.
- **Secondary Service**-The Network customer may use the Transmission Provider's Transmission System to deliver energy to its Network Loads from resources that have not been designated as Network Resources. Such energy will be transmitted, on an as-available basis, at no additional charge. Deliveries from resources other than Network Resources will have a higher priority than any non-firm Point-to-Point Service under Part II of the Tariff.
